

Guidelines for occupational safety and environmental protection

Compliance

We ensure legal compliance for occupational health, safety and environmental protection (including energy efficiency, energy use and energy consumption) based on compliance with all relevant laws, other regulatory requirements and Lenze standards.

Continuous improvement

We strive to continuously improve our environmental and energy performance as well as the health and safety of our employees by implementing specific targets. We also continuously optimize our management systems.

Competence and awareness

We promote the competence and awareness of employees and people who work on our behalf. We motivate our employees and customers to behave in a safe and environmentally conscious manner by providing information and training.

Integration into processes

We integrate energy efficiency, occupational safety and environmental protection into our processes.

Safe and healthy working conditions

We protect everyone at Lenze from accidents and work-related illnesses by continuously identifying and assessing hazards in the workplace and introducing measures to minimize risks. We involve our employees and their representatives at their respective workplaces in this process. Necessary awareness-raising measures, training and the provision of other necessary resources ensure safe working conditions and proactively promote the physical and mental health of our employees.

Improving energy efficiency

We determine and evaluate the main energy consumption at our certification-relevant sites and implement measures to reduce it. When it comes to procurement and design, we opt for energy-efficient products and services, taking economic efficiency into account.

Protecting the environment

We conserve resources by minimizing the use of raw materials, chemicals and water. By reducing waste, emissions, hazardous substances, pollutants, greenhouse gases and water pollution, we reduce the negative impact on the environment.

Product development

We check the use of recycled materials and the recyclability of our products and product packaging as early as the development stage. When developing our products, we ensure that they have the longest possible service life and can be retrofitted. This enables us to reduce the environmental impact of our products until the end of their life.

Products and services

We promote energy savings for our customers by developing and selling energy-efficient development and distribution of energy-efficient technologies and products. Our products meet the highest safety standards for the health and safety of our customers throughout their entire life cycle. Due to the nature of the product, our products contain a high proportion of recyclable materials.
